

IMPORTANT NOTE:

/run/media/ljunjie/资料/Learning_Video/writing-running-fixing-code/01_writing-code/04_tools/10_assignment-01-apple_instructions.html

After launching the Practice Programming Environment, move into the **01_apple** folder to begin the assignment.

```
$ cd learn2prog/01_apple
```

In this folder you will find a README file that contains instructions for the assignment. You can view this file using Emacs, or by using the *cat README* command to output it to your terminal. Don't forget to add your file(s) to git, commit and push, and then run the *grade* command to pass this assignment.

If you did not pass the previous assignment (**00_hello**), then you won't see the **01_apple** folder with this assignment. Complete the `00_hello` assignment before attempting this assignment.

We strongly encourage you to do the assignments in order, as each assignment builds on previous assignments, and you need to pass all assignments to pass this course. If you didn't pass the previous assignment but really want to work on this assignment, you can release it using the command:

```
$ fast-forward 01_apple
```
